

# BAYCOM SAFE HOSPITALS

DETECT. ANALYZE. COMMUNICATE. RESPOND.

## Take Hospital Safety to the Next Level

Your teams work every day to make sure the patients in your hospital receive individualized quality care while operating in a non-stop and unpredictable environment. But providing the highest level of care is only achievable with a foundation of safety. Here at BAYCOM, we've created the first and only end-to-end security technology ecosystem that unifies voice, video, data and analytics on one single platform - providing you with the foundation of safety you need by addressing the unique challenges of your hospital.

### DETECT

Integrated **video security** uses artificial intelligence to create high visibility across your facility and helps to deter potential threats. **Automatic license plate recognition** analyzes vehicles entering and exiting your campus. **Access control** provides entry management, immediate lockdown capabilities, and push notifications to devices. **Radio alerts** ensure all personnel—across multiple teams—are informed of critical information simultaneously.

### ANALYZE

**Appearance searches** quickly and seamlessly explore video footage to record where a particular individual has been before and after a particular point in time. Integrated **access control** and badging provide real-time insights into personnel movements throughout the facility. **Unusual Motional Detection** technology reveals atypical events that need investigating—such as a visitor in an off-limits area.

**BAYCOM**

A lifeline in the moments that matter

# BAYCOM SAFE HOSPITALS

DETECT. ANALYZE. COMMUNICATE. RESPOND.

## COMMUNICATE

Two-way **radiocommunications** instantly and reliably connect security, administration, caregivers, staff and local first responders. Radio alerts ensure key personnel—even across multiple teams—are informed of critical alerts. Broadband **push-to-talk** extends your reach by enabling voice and data information to be shared across devices.

## RESPOND

Dynamic **interoperability** makes it easy to directly share data with first responders in real-time, enhancing situational awareness. Incident management streamlines the logging of incident reports and makes it easy to share multimedia with other personnel. **CommandCentral** software aggregates points of intelligence to help coordinate incident response with informed decision making.
