

# BAYCOM

A Lifeline in the Moments that Matter

## THERMAL SCREENING FOR THE WORLD WE LIVE IN

BAYCOM's **out-of-the-box, simple set up** screening solution can be added to an existing video monitoring system or stand-alone to help businesses and organizations of all sizes protect against the spread of COVID-19.

The thermal camera sensor technology works in conjunction with a heat emitter device, known as a Blackbody, which is set three meters apart from the camera. This device emits heat and is used by the camera as a reference point to measure the person's temperature. Unlike some other devices, this solution **works based on skin temperature** enabling your subjects to be **screened even if they are wearing a face mask**.

Easily get your screening solution up and running

Temperature detection in seconds

Stand alone or integrate with current system

**READY TO DEPLOY THIS SOLUTION TODAY?**

Reach out to your BAYCOM Representative or call us at 800-726-5426 to get started.
